

Gage manufacturers are as important to the quality profession as automobile manufacturers are to the commuting public. Without them, the world just wouldn't run smoothly. Gage manufacturers are responsible for providing industry with a plethora of tools to help maintain quality control, including micrometers, thread gages, depth gages, digital indicators, height gages and dial indicators, to name a few.

Gages help keep all processes and instruments in check. They tell manufacturers which of their materials, instruments and tools are out of tolerance; they indicate whether a certain part should move on to the production line or be scrapped; and they measure the length of time a part is still usable. Essentially, gages are manufacturers' fact-checkers.

Because of this hefty responsibility, it's important for organizations to seek the gages that will most benefit their company. The companies listed in the Gage Manufacturers Directory specialize in providing you with the right tool for the job. Not only can they supply your organization with the gages you need, many of them also provide technical support, calibration services and on-site training to help you learn how to use the instruments. To see these tools in action, you may want to consider attending a trade show or two, which occur frequently throughout the year. If unable to do so, many of these companies are willing to either host an online demonstration or come to your facility.

This directory is not meant to endorse or exclude a particular organization. Rather, it should be used as the starting point in the data-gathering process. Readers are encouraged to contact the companies directly for more information and to ask for—and check—references.

Gages Guide

Gage Manufacturers Directorypage 66

This directory of gage manufacturers includes the company name, address, phone and fax numbers, Web address, and the types of gages each company offers, if provided. Brief company descriptions, if provided, can be found on our Web site at www.qualitydigest.com/directories.

Glossary

- A2LA**—American Association for Laboratory Accreditation
- ACIL**—American Council for Independent Laboratories
- Accuracy**—the deviation of a part or measuring system from a known standard
- Actual value**—the measured value of a feature
- ANSI**—American National Standards Institute
- Comparator**—a measuring component that compares workpiece characteristics to a reference
- Deviation**—the difference between the actual measured dimension and the nominal dimension
- IEEE**—Institute of Electrical and Electronics Engineers
- Interpreter**—a processor, either human or electronic, that assesses information from the measuring device's comparator
- LAB**—Laboratory Accreditation Bureau
- Micrometer**—a caliper that has a spindle moved by a finely threaded screw
- NIST**—National Institute of Standards and Technology
- Nominal**—the standard or desired dimension or size of a feature. The print values for the measurement as opposed to the measured values.
- Repeatability**—a measure of the ability of an instrument to produce the same measured value when sequentially sensing the same quantity under similar measurement conditions
- SCC**—Standards Council of Canada
- SRM**—standard reference material
- Touch probe**—an electronic contact measuring device that is mounted on a machine tool, gage or coordinate measuring machine
- UL**—Underwriters Laboratories

The information contained in Quality Digest directories, plus some additional information, is available online at www.qualitydigest.com/directories.

RENISHAW
apply innovation™

WHEN PRECISION COUNTS

Insist on genuine Renishaw Styli.

Genuine Renishaw stylus are manufactured from the highest quality materials.

Renishaw has conducted extensive research into the use of alternative ball materials for both discrete-point and scanning applications.

Ruby—the industry standard—is still the best material for most applications, but we have added silicon nitride and zirconia oxide to our standard range to make sure that you have the optimum solution.

Silicon nitride is recommended for use in heavy duty scanning applications on aluminium. Zirconia is ideal for tough material applications such as cast iron. Both are available as AFBMA 3290 Grade 5 balls—as standard.

Choose from over 2000 standard and custom solutions. Call Renishaw at 847-286-9953 to order your next genuine Renishaw stylus and your copy of our latest brochure and wall chart.

Don't settle for less!
