

Optical/Vision Systems

Instruments that fall under the category of optical and vision systems are varied. The one characteristic that they all have in common, however, is their ability to inspect an article using sight. To name a few, there are mountable cameras for coordinate measuring machines, optical comparators, microscopes, and noncontact video and laser systems. Some of these tools are even capable of gathering, storing and analyzing data.

Along with optical and vision systems, we have also included providers of nondestructive test equipment utilizing such technologies as X-ray, eddy current, ultrasonic and liquid penetrant. These technologies allow users to measure coating thickness, check for subsurface flaws or monitor corrosion on inside tank walls without having to cut into or disassemble the object to be examined. We have also included companies that provide NDT services.

The companies listed in the following directories manufacture optical/vision systems and/or offer nondestructive evaluation instruments and services.

These directories are not meant to endorse or exclude a particular organization. Rather, they should be used as the starting point in the data-gathering process. Readers are encouraged to contact the companies directly for more information and to ask for—and check—references.

Optical/Vision Systems Guide

Optical Dimensional Measurement

Systems Directorypage 74

This directory of optical dimensional measurement systems manufacturers includes the company name, address, phone and fax numbers, and Web address. Brief company descriptions, if provided, can be found on our Web site at www.qualitydigest.com/directories.

Vision Systems Directorypage 77

This directory of vision systems manufacturers includes the company name, address, phone and fax numbers, and Web address. Brief company descriptions, if provided, can be found on our Web site at www.qualitydigest.com/directories.

Nondestructive Testing Directorypage 79

This directory of nondestructive testing manufacturers and service providers includes the company name, address, phone and fax numbers, and Web address. A brief description of each company's offerings can be found on our Web site at www.qualitydigest.com/directories. (Please note that not all companies provided us with descriptions.)

Glossary

- A2LA**—American Association for Laboratory Accreditation
- ACIL**—American Council of Independent Laboratories
- ANSI**—American National Standards Institute
- ASME**—American Society of Mechanical Engineers
- Brightfield**—an illumination technique that provides flat, even lighting of the field of view
- CAD**—computer-aided design
- CAE**—computer-aided engineering
- CAM**—computer-aided manufacturing
- Confocal microscope**—a visual inspection device that uses white light or lasers to construct a highly detailed map of a 3-D sample, optically sectioning a given sample point-by-point and layer-by-layer
- Darkfield**—an illumination technique that lights the specimen surface from an oblique angle to highlight surface problems
- IEEE**—Institute of Electrical and Electronics Engineers
- NIST**—National Institute of Standards and Technology
- Optical comparator**—a visual inspection device that uses large ground-glass screens for imaging, offering a larger field of view than microscopes at a somewhat lower resolution
- Profile projector**—optical comparator
- SCC**—Standards Council of Canada
- SRM**—standard reference material

The information contained in Quality Digest directories, plus some additional information, is available online at www.qualitydigest.com/directories.
